Tale of Two PARADIGMS

The year 2012 marks the 50th anniversary of the publication of Thomas S. Kuhn's *The Structure of Scientific Revolutions*. Up until recently, the book's philosophical reception has been shaped, for the most part, by the debates and the climate in philosophy of science in the 1960s and 1970s; this new collection of essays takes a renewed look at this work. This volume concentrates on particular issues addressed or raised in light of recent scholarship and without the pressure of the immediate concerns scholars had at the time of the *Structure's* publication. There has been extensive research on all of the major issues concerning the development of science which are discussed in *Structure*, work in which the

scholars contributing to this volume have all been actively involved. In recent years they have pursued novel research on a number of topics relevant to Structure's concerns, such as the nature and function of concepts, the complexity of logical positivism and its legacy, the relation of history to philosophy of science, the character of scientific progress and rationality, and scientific realism, all of which are brought together and given new light in this text. In this way, our book makes new connections and undertakes new approaches in an effort to understand the Structure's significance in the canon of philosophy of science. An up-to-date, clear but rigorous introduction to the philosophy of science offering an indispensable grounding in the philosophical understanding of science and its problems. The book pays full heed to the neglected but vital conceptual issues such as the nature of scientific laws, while balancing and linking this with a full coverage of epistemological problems such as our knowledge of such laws. The study of the interactions between business organizations and their natural environments has gained momentum recently under the aegis of social and environmental accounting and reporting (SEAR), and as a diluted form of response in corporate social responsibility (CSR). Environmental Accounting, Sustainability and Accountability envisages accounting as an effective instrument in improving this interrelationship. It comprehensively describes how organizations can capture their environmental performance and thereby address societal concerns. The book closely explores how organizations can embed care for the environment as fundamental to

their functioning. It broadly covers traditional accounting as a measuring instrument, contemporary advances and unresolved problems, alternative perspectives and recent developments. The central idea proposed here is to evolve the environmental accounting framework and bring calculative aspects into sustainability thinking that businesses are responsible for. Among the other important innovative ideas discussed are new costing techniques for waste management, accounting schematics of carbon trade, green information needs of management and the extension of the environmental viewpoint to information systems and technology. Lifting the Scientific Veil has been written to afford the nonscience student the same meaningful opportunity to explore germane scientific topics as is generally given the science student to learn about the humanities and social sciences. Since nonscientists are generally responsible for making laws, financing research, or, at the very least, for voting, it is essential that they understand the significant impact that science has on everyday life. The book is designed to introduce nonscientists in an informative and comprehensible manner to four of the most significant scientific theories of the twentieth century: the big bang, quantum physics, relativity, and evolution. After each theory is explained informally, the book shows how that theory and related technology impact upon one's personal life. Legal and political aspects of these theories are explored as well as philosophical and theological implications. Research methodology is as old as academia itself. Research methodology shifts in strategy as it crosses different disciplines

and theories. This, too, is true with the shifting landscape of research opportunities and technologies available to global researchers. To achieve the most accurate and substantial research, it is important to be knowledgeable of emerging research methodologies. The Research Anthology on Innovative Research Methodologies and Utilization Across Multiple Disciplines discusses the most recent global research innovations made across multiple fields. This anthology further discusses how these research methodologies can be applied to a variety of specific fields. Covering topics such as creative thinking, qualitative research, and the research method landscape, this book is essential for students and faculty of higher education, scientists, researchers, sociologists, computer scientists, and academicians. Research Methods for Accounting and Finance is an essential text for accounting and finance students undertaking research for the first time. It demystifies the research process by providing the novice researcher with a must-have guide through all of the stages of the research process, from identifying a research topic to the finished project. Personal success comes from taking positive action. Yet not everyone is able to take positive action and therefore they fail to meet their potential in life. Why is that? What is it that stops people from being as successful as they could be? I believe I have the answer to these questions and it is all to do with Paradigms. This is because there is a direct correlation between our paradigms and how we act and behave. By changing our paradigms we immediately change the way we think and act. And because we attract to ourselves what

we think about, it is essential we think about, dream about and envision our future. Our paradigms attract what is required to achieve our visions and what make us successful. The Paradigm of Success sets out a journey towards success through having a powerful vision energised by action that is synergised by a strong sense of 'why' and 'belief' which are framed by the paradigms. It is a journey of incremental learning that when applied may empower us to make a positive difference in our own lives and in the lives of others. Accounting is the discipline with the oldest historical culture, being the first to be recognized by humanity when Adam and Eve were made to account for what they did in paradise. It is also the only discipline that will come into play in the Hereafter, where everybody would be raised up as an accountant - to account for all they have done during their life time on earth! Accounting is a service-providing discipline, with a rich theoretical background, which makes available information (especially financial) to guide various decision-making processes. Business owners, creditors, managers, prospective investors, government and its agencies, employees and even the general public seek accounting information to guide them when taking various informed decisions about reporting entities and the environment within which they operate. This book addresses the historical accounting culture, its theories as well as its practices. It is made up of fifteen chapters, covering various historical, theoretical and practical aspects of Accounting, ranging from accounting standardization to financial reporting. The book is an attempt to address some of

the lacunae in advanced accounting issues, both in theory and in practice. Students of advanced accounting theory and practice at the professional and academic levels in Universities, Polytechnics and Professional Institutes would find the book an essential companion. Craig Deegan's Financial Accounting Theory provides a concise approach while comprehensively covering both traditional and contemporary theories that have emerged as the practice of accounting has evolved. Social and environmental accountability and reporting issues are discussed in depth, along with coverage of critical perspectives, public sector accounting and fair value. Instructors and students value Financial Accounting Theory for its reader-friendly style using straightforward explanations and numerous practical examples. This new edition continues to follow this approach with the addition of *NEW* content focusing on how different perspectives of organisational responsibilities and 'accountabilities' impact the way accounting is performed, and the theories that different researchers choose to use/apply. Any company or individual that has experience installing a Materials Requirement Program (MRP), an Enterprise Resource Planning (ERP), program or a sophisticated accounting system or any of the newer quality initiative has learned firsthand the importance of first, preparing and collecting the right data first. Remember the importance of the Bill of Materials (BOM)? We even coined the phrase 'garbage in, garbage out,' from those days. It would take a normal company, years to straighten out the MRP installations, because they were normally installed without any

forethought. Well, establishing a good company quality improvement program today, takes as much or more in preparation and effort. The problems companies face are basically all the same; poor preparation and lack foresight of the impact on the company, the customer and the supplier. Companies always underestimate the extent of the installation effort and the total impact on the entire system. By installed a new program or upgrade to an existing program it always impacts most parts of the whole system, besides the internal workings of the installing company. It's not that most business personnel aren't in agreement that programs using Lean, Six Sigma and TQe disciplines are good logical approaches to achieving worthwhile quality results, its' just that implementing a worthwhile semblance of a decent program, and reaping the benefits, has avoided our expectations. Everyone knows about TQM and can already suggest they have implemented a semblance of a program already, but at what present benefit? By implementing the best of logical thinking existing today, a new paradigm of performance, companies that are manufacturers, retailers, distributors and service, can recognize potentials they presently do not know how to find. What all executives or, managers of companies want, are to feel a sense of accomplishment through improving growth and profitability, not manipulating figures. This book follows a logical progression continually expanding almost all company's problems needed changing before making a quality initiative change. If you are interested in learning what many world class companies have already discovered, this book is for you. Many would suggest

becoming world class, is a hard path to take because they are constantly trying. It is not! A clear path to take, yes, but hard, no, if it is done right! I hope the following will make your path easier. This book is written for anyone interested in making business a career. The following approach has taken forty years to mature. You can take advantage and do it in two, 'if you are diligent! ' Provides ideas on how intellectual capital through emerging technologies can support business performance. Covers topics such as competitive strategy, human resource management, and organizational learning. The second edition of Craig Deegan and Jeffrey Unerman's market leading text presents the various theories of financial accounting through a balanced and dynamic approach. Students are given all the tools to engage with these theories and are encouraged to critically evaluate and challenge them. Clearly written and user friendly, this new edition provides comprehensive coverage of internationally developed accounting theories from a European perspective. Written by two experienced lecturers, this is the first student-centered textbook to bridge the technical and theoretical aspects of management accounting change. Packed full of pedagogical features, including mini-cases, learning outcomes, key terms, article summaries, key concept boxes, real-world cases, chapter summaries and further reading suggestions and resources, it is clear and accessibly written, covering all the major emerging topics in management accounting theory. Discussing technical developments in management accounting from conventional cost accounting to contemporary strategic management accounting and

beyond, in four parts it: shows how conventional cost accounting techniques and management control models evolved in line with the development of mass production and bureaucracy explores how recent developments such as customer and strategic orientations in business, flexible manufacturing, post-bureaucracy, network and virtual organizational technologies implicate in management accounting provides a number of alternative theories through which the transition of management accounting from mechanistic to post-mechanistic approaches can be explained – elaborating both rational and interpretive/critical theories. This excellent text meets a desperate need for an advanced management accounting textbook that incorporates theory and practice and is accessible and engaging for all those studying in this challenging area. This volume draws together contemporary topics, themes and methodologies in the field of sustainability reporting and assurance to reveal how sustainability information is actually used, interpreted and processed by internal and external users. The book introduces pragmatic constructivism as a paradigm for understanding actors' construction of functioning practice and for developing methods and concepts for managing and observing that practice. The book explores, understands and theorises organisational practices as constructed through the activities of all organisational actors. Actors always act under presumptions of a specific actor-world-relation which they continuously construct, adjust and reconstruct in light of new experiences, contexts and communication. The outcome of the actor-world-relation is a reality construction. The reality construction may function successfully or it may be hampered by fictitious and illusionary elements, due to missing or faulty actor-world relations. The thesis is that four dimensions of reality – facts, possibilities, values and communication – must be integrated in the actor-world-relation if the construct is to form a successful basis for effective, functioning actions. Drawing on pragmatic constructivism, the book provides concepts and ideas for studies regarding actors

and their use of management accounting models in their construction of organized reality. It concentrates on researching and conceptualizing what creates functioning reality construction. It develops concept and methods for understanding, analysing and managing the actors' reality constructions. It is intended for people who do research on or work actively with developing management accounting. Based on a study covering a one-year financial reporting cycle at a commercial subsidiary of a well-known scientific research organization, *Inside Accounting* examines how accountants and non-accounting managers construct their company's earnings. Addressing issues in both internal management accounting, such as budgeting, performance evaluation, and control, as well as external financial accounting, such as book keeping, monthly/year end accounts and auditing, David Leung focuses on how people classify transactions, make professional judgments and use computer software for accounting, and prepare for and facilitate the auditing process. He also looks at accountancy training and the impact of people's affiliations to the accounting profession or other professions on their accounting and on their perceptions of financial statements. Other contingent or contextual factors that influence the choice of accounting method, such as time pressure, reward structures, management authority and institutions are also considered. David Leung's research employs an innovative blend of theory and practice that redresses the imbalance between ethnographic studies of financial accounting, and management accounting and helps close the gap between the academic curriculum and the

experiences of practitioners. His research leads the author to conclude that no act of accounting classification is ever indefeasibly correct; that the accounting community's institutions and authority are central to the accounting process and to the 'truth and fairness' of accounting numbers; that accounting training involves extensive use of learning by doing; and that both accountants and non-accounting managers have goals and interests that often result in no better than 'good enough' accounting. This book will appeal to accounting and finance professionals and academics in finance, as well as to sociologists and academic researchers interested in research methods and science studies. Capitalize on Your Company's Intangible Assets... Leading Companies Show You How "Einstein in the Boardroom makes a great sequel to Edison in the Boardroom. Financial accounting, reporting and regulation is a vast subject area of huge global importance, with interest rising significantly in the light of the ongoing global financial crisis. The authors begin with a broad overview of the subject of accounting, setting the stage for a discussion

on the theoretical and practical issues and debates regarding financial reporting, which are expanded on in the second part of the book. This includes how to define the reporting entity, recognition and measurement of the elements of financial statements, fair values in financial reporting and the costs and benefits of disclosure. The third part assesses the interest, need and theories behind the accounting, reporting and regulation industry, while parts four and five look at the institutional, social and economic aspects; with issues such as accounting for environmental management and, accounting regulation and financial reporting in Islamic countries, both issues of ever increasing importance. This authoritative Companion presents a broad overview of the state of these disciplines today, and will provide a comprehensive reference source for students and academics involved in accounting, regulation and reporting. Philosophy of science studies the methods, theories, and concepts used by scientists. It mainly developed as a field in its own right during the twentieth century and is now a diversified and lively research area. This book surveys the current state of the discipline by focusing on central themes like confirmation of scientific hypotheses, scientific explanation, causality, the relationship between science and metaphysics, scientific change, the relationship between philosophy of science and science studies, the role of theories and models, unity of science. These themes define general philosophy of science. The book also presents sub-disciplines in the philosophy of science dealing with the main sciences: logic, mathematics, physics, biology, medicine, cognitive science,

linguistics, social sciences, and economics. While it is common to address the specific philosophical problems raised by physics and biology in such a book, the place assigned to the philosophy of special sciences is much more unusual. Most authors collaborate on a regular basis in their research or teaching and share a common vision of philosophy of science and its place within philosophy and academia in general. The chapters have been written in close accordance with the three editors, thus achieving strong unity of style and tone. A classic study of an influential American religion....Provides both the specialist in religion and the general reader with a thoughtful history of this complex religion. This indispensable text brings together important essays on the themes, issues, and controversies that have shaped the development of rhetorical theory since the late 1960s. An extensive introduction and epilogue by the editors thoughtfully examine the current state of the field and its future directions, focusing in particular on how theorists are negotiating the tensions between modernist and postmodernist considerations. Each of the volume's eight main sections comprises a brief explanatory introduction, four to six essays selected for their enduring significance, and suggestions for further reading. Topics addressed include problems of defining rhetoric, the relationship between rhetoric and epistemology, the rhetorical situation, reason and public morality, the nature of the audience, the role of discourse in social change, rhetoric in the mass media, and challenges to rhetorical theory from the margins. An extensive subject index facilitates comparison of key concepts and

principles across all of the essays featured. This title was first published in 2001. This study indicates that researchers have far to go in understanding and assessing how development projects work. The author shows that, often, the perception of failure is not shared by those whom were intended to benefit. She uses a case study of Samoan villagers introduced to cattle farming to examine the wider development process and challenge the conventional theories. By drawing on people-centred perspectives that give much greater weight to the role of culture in development, the volume does not simply criticize development project management, but suggests practical and positive ways forward, encouraging spontaneous indigenous development which should be supported by projects where appropriate. An indispensable guide for managers concerned with cost, strategy, and business re-engineering. Experts on the strategic use of cost data, the authors show how strategic cost management is revolutionizing accounting practices in leading companies. Includes numerous examples. 120 line drawings. Whether taking a single course in elementary accounting or studying to become a chartered accountant, this textbook is designed to make the subject accessible and studying it easy and enjoyable. It is written in a friendly, personal style, and provides many examples with which students can identify. The text achieves this by:

- integrating learning objectives so that students are reminded at regular intervals of what they should be able to achieve at that stage of their studies
- regularly allowing students to test their theoretical understanding of concepts and principles through the use of

self-tests • encouraging students to assess their technical understanding and ability to apply this understanding frequently through the use of activities, for which solutions are provided • providing students with the opportunity to review each chapter by completing revision questions, for which solutions are provided • assisting students with revision questions by providing a suggested approach for each question. Whether the book is used for a single course in introductory accounting or as the basis for further study, it is the author's hope that students will enjoy using it; that they will find the study of accounting fun, dynamic and easy; and that the knowledge that they acquire will benefit them throughout their lives.

Advances in Accounting Education is a refereed, academic research annual that aims to help meet the needs of faculty members who are interested in ways to improve accounting classroom instruction at college and university levels. There is a renaissance in the use of the term "scholarship," as it is being used to define areas of academic endeavour, describe academic work and achievements, and measure the quality of higher education. Although all academicians are required to engage in scholarship, it is difficult to navigate as there is a misunderstanding of this concept as new methods and approaches emerge. Emerging Methods and Paradigms in Scholarship and Education Research is an essential academic book that is designed to

explain the areas of scholarship and their contemporary relationship to key components of academic work: research, teaching, service, and engagement. The chapter authors explore conceptions of scholarship, paradigms, and methods that fit a variety of contexts and needs. A supplementary reader for all levels of Cost and Management Accounting courses. This reader contains thirty-nine recent business press and academic articles all representing state-of-the-art thinking and examples on a wide variety of management accounting topics in many types of service and manufacturing contexts. The articles parallel the contents of Management Accounting 3/e (Atkinson, et al.), but can be used with any core management and cost accounting text. While this book can be used to supplement any management or cost accounting text, the readings have been designed to accompany Anthony Atkinson, Rajiv Banker, R. S. Kaplan and S. Mark Young's textbook, Management Accounting, 3rd Edition (Prentice Hall, 2001). In addition, the Instructor's Manual keys the readings to other textbooks so that the casebook can also be used with these entries. The tools used in data collection have the ability to influence the ways information is perceived and generated. Analyzing research processes is a concept that can be overlooked, though is as important as the information itself. Methods and Paradigms in

Education Research addresses the innovative formulaic approaches taken in research to challenge their effectiveness. Featuring coverage on selection, forms, and analytical procedures of data, this publication is essential for researchers, students, and academicians seeking current information on understanding research methodology. Originally published in 1997, the principal object of the editors in compiling this collection of Robert R. Sterling's work was to make more of his publications accessible in a convenient form to the academic and professional accounting communities, and to current and future generations of accounting students. While it is not a complete portfolio of his published work to date, this anthology contains all of Sterling's major articles. Through his long-term quest for a science of accounting, Sterling sought to bring together accounting educators, practitioners, regulators, and researchers in order to identify credible advancements in accounting knowledge, authoritative changes to accounting practice, and transforming improvements to accounting education.
