Introduction to Forensic Sciences, Second Edition is the current edition of this bestselling introductory textbook. Dr. William Eckert, one of the world's foremost authorities in the area of forensic medicine, presents each of the distinct fields that collectively comprise the forensic sciences in a logical, relatively non-technical fashion. Each chapter is written by a well-known expert in his/her respective field, and each specialty area is thoroughly treated. When appropriate, the various methods of applying these sciences in different countries are covered. Heavily illustrated, the Second Edition has been updated to include current procedures and techniques that were not available or usefully developed when the first edition was published. Features include: One of the first books to focus solely on the benefits of using "XML and Perl" together, this is full of practical, real-world examples readers can really use--ranging from fundamental to advanced. "XML and Perl" is a hands-on approach to the benefits of using Perl for all XML projects. These ready-to-use tools are applicable to problem solving, decision making, creativity and innovation, quality, operations and service. Combining guidance for writing over 40 typers of professional documents with thorough coverage of grammar, usage, and style, the Handbook of Technical Writing functions as both a writer's handbook and a complete guide to technical communication. It provides quick access to hundreds of topics and scores of sample documents and visuals. [publisher's note] Information technology (IT) has brought about a major shift in the nature and speed of knowledge processing, thereby transforming the way business and, indeed, governments, function. An integral aspect of social capital, IT can either be an empowering force for the marginalized, or be instrumental in creating a new dimension of inequality. Harnessing IT for effective socio-economic transformation into an epistemic society has created a need to revisit prevailing notions of governance and development in the country, which is confronted with resource constraints and a yawning digital divide. Conceived against this background, this volume consists of 21 chapters written by authorities responsible for planning and implementing IT in India, including the President of India, H.E. Dr A P J Abdul Kalam, senior government officials, IT professionals and scholars. The volume contains case studies of the application of IT in India, both in agriculture and in improving

public service delivery systems. Technical Reports are usually written according to general standards, corporate - sign standards of the current university or company, logical rules and practical - periences. These rules are not known well enough among engineers. There are many books that give general advice in writing. This book is specialised in how to write Technical Reports and addresses not only engineers, but also natural sci- th tists, computer scientists, etc. It is based on the 6 edition published in 2008 by st Vieweg in German and is now published as 1 edition by Springer in English. Both authors of the German edition have long experience in educating en- neers at the University of Applied Sciences Hannover. They have held many l- tures where students had to write reports and took notes about all positive and negative examples that occurred in design reports, lab work reports, and in theses. Prof. Dr. Lutz Hering has worked for VOLKSWAGEN and DAIMLER and then changed to the University of Applied Sciences Hannover where he worked from 1974 until 2000. He held lectures on Technical Drawing, Construction and Design, CAD and Materials Science. Dr. Heike Hering worked nine years as a Technical Writer and was responsible for many CAD manuals in German and English. She is now employed at TÜV NORD Akademie, where she is responsible for E-Learning projects, technical documentation and software training and supervises students who are writing their theses. Prof. Dr. -Ing. Historians of British colonial rule in India have noted both the place of military might and the imposition of new cultural categories in the making of Empire, but Bhavani Raman, in Document Raj, uncovers a lesser-known story of power: the power of bureaucracy. Drawing on extensive archival research in the files of the East India Company's administrative offices in Madras, she tells the story of a bureaucracy gone awry in a fever of documentation practices that grew ever more abstract—and the power, both economic and cultural, this created. In order to assert its legitimacy and value within the British Empire, the East India Company was diligent about record keeping. Raman shows, however, that the sheer volume of their document production allowed colonial managers to subtly but substantively manipulate records for their own ends, increasingly drawing the real and the recorded further apart. While this administrative sleight of hand increased the company's reach and power within the Empire, it also bolstered profoundly new orientations to language, writing, memory, and pedagogy for the officers and Indian subordinates involved. Immersed in a subterranean world of delinquent scribes, translators, village accountants, and entrepreneurial fixers, Document Raj maps the shifting boundaries of the legible and illegible, the legal and illegitimate, that would usher India into the modern world. common form of human communication and represents the cornerstone of our ability to preserve and record information. Writing, by its very definition, requires artifacts in the form of tools to write with and a medium to write on. Through history these artifacts have ranged from sticks and clay tablets, feather and leather, crude pens and paper, sophisticated pens and paper, typewriters and paper; and electronic devices with or without paper. The development of writing tools has straightforward objectives, to make writing easier and more effective and assist in distributing written communication fast and efficiently. Both the crudest and most sophisticated forms of writing tools act as mediators of human written communication for the purpose of producing, distributing and conserving written language. In the modern world the computer is arguably the most sophisticated form of mediation, the implications of which are not yet fully understood. The use of computers (a writing artifact which mediates communication) for the production and editing of text is almost as old as computers themselves. Early computers involved the use of crude text editors and a writer had to insert commands resembling a programming language to format and print a document. For example to underline a word the writer had to do the following, This is an example of how to .ul underline a single word. in order to produce: This is an example of how to underline a single word.

This volume contains papers selected for presentation at the 6th IAPR Workshop on Document Analysis Systems (DAS 2004) held during September 8–10, 2004 at the University of Florence, Italy. Several papers represent the state of the art in a broad range of “traditional” topics such as layout analysis, applications to graphics recognition, and handwritten documents. Other contributions address the description of complete working systems, which is one of the strengths of this workshop. Some papers extend the application domains to other media, like the processing of Internet documents. The peculiarity of this 6th workshop was the large number of papers related to digital libraries and to the processing of historical documents, a taste which frequently requires the analysis of color documents. A total of 17 papers are associated with these topics, whereas two years ago (in DAS 2002) only a couple of papers dealt with these problems. In our view there are three main reasons for this new wave in the DAS community. From the scientific point of view, several research fields reached a thorough knowledge of techniques and problems that can be effectively solved, and this expertise can now be applied to new domains. Another incentive has been provided by several research projects funded by the EC and the NSF on topics related to digital libraries. This four-volume set of LNCS 12821, LNCS 12822, LNCS 12823 and LNCS 12824, constitutes the refereed proceedings of the 16th International Conference on Document Analysis and Recognition, ICDAR 2021, held in Lausanne, Switzerland in September 2021. The 182 full papers were carefully reviewed and selected from 340 submissions, and are presented with 13 competition reports. The papers are organized into the following topical sections: document analysis for literature search, document summarization and translation, multimedia document analysis, mobile text recognition, document analysis for social good, indexing and retrieval of documents, physical and logical layout analysis, recognition of tables and formulas, and natural language processing (NLP) for document understanding. Training Kit for Linux Fundamentals, OpenOffice (Writer, Calc, Impress), Draw, GIMP & Internet. No previous computer knowledge required. Unique 3-Stage Self-learning System with CD. The book is your first stage in learning. All the concepts are explained to you in clear, simple language along with hundreds of illustrations and graphics. Unlike in the other books, your learning doesn't stop here. Here you can actually practice what you have learnt. To do this, move to the next mode. "Islamic law is the epitome of Islamic thought, the most typical manifestation of the Islamic way of life, the core and kernel of Islam itself," asserts renowned Islamic law scholar Joseph Schacht. At a time when Islamic fundamentalism is flourishing, the relation of religion to law-related behavior needs to be scrutinized. This volume considers Middle Eastern law as practiced by Muslims in a diversity of Middle East nations. Eight chapters, contributed by experts in the field, and a cogent introduction by Dwyer deal with the practical intricacies of personal status law and assess law in the public domain. A Programmer's Guide to ADO.NET in C# begins by taking readers through a fast-paced overview of C# and then delves into ADO.NET. Why should C# programmers use it instead of the existing technologies? What new functionality does it offer? The chapters that follow go through the details on each of the major Data Providers of the .NET platform (OleDb, SQL Server, and ODBC) that enable you to read and write data to the targeted database. These chapters also serve as a good reference for looking up detailed methods and properties for these data provider classes. Authors Chand and Gold also show C# programmers how to work with XML classes and how to integrate XML into the ADO.NET architecture. The book provides programmers with handy ideas about taking advantage of the VS.NET IDE and how you can tie your data to the myriad of powerful controls including the multi-faceted Data Grid. Finally, it goes through creating a guest book application for the Web so you can see how all the pieces fit together. The practical, user-friendly, insider's guide to mastering StarOffice, which opens files in over 200 formats, including Microsoft Office Word, Excel, and PowerPoint files. This practical, comprehensive, task-based guide to making the most of StarOffice 6.0 incorporates solutions to questions from hundreds of new StarOffice users, as well as insider's tips for power users, making this the most practical, task-oriented book around. This book constitutes the refereed proceedings of the 14th IAPR International Workshop on Document Analysis Systems, DAS 2020, held in Wuhan, China, in July 2020. The 40 full papers presented in this book were carefully reviewed and selected from 57 submissions. The papers are grouped in the following topical sections: character and text recognition; document image processing; segmentation and layout analysis; word embedding and spotting; text detection; and font design and classification. Due to the Corona pandemic the conference was held as a virtual event. In 2005, Microsoft quietly announced an initiative to bring dynamic languages to the .NET platform. The starting point for this project was a .NET implementation of Python, dubbed IronPython. After a couple years of incubation, IronPython is ready for real-world use. It blends the simplicity, elegance, and dynamism of Python with the power of the .NET framework. IronPython in Action offers a comprehensive, hands-on introduction to Microsoft's exciting new approach for programming the .NET framework. It approaches IronPython as a first class .NET language, fully integrated with the .NET environment, Visual Studio, and even the open-source Mono implementation. You'll learn how IronPython can be embedded as a ready-made scripting language into C# and VB.NET programs, used for writing full applications or for web development with ASP. Even better, you'll see how IronPython works in Silverlight for client-side web programming. IronPython opens up exciting new possibilities. Because it's a dynamic language, it permits programming paradigms not easily available in VB and C#. In this book, authors Michael Foord and Christian Muirhead explore the world of functional programming, live introspection, dynamic typing and duck typing, metaprogramming, and more. IronPython in Action explores these topics with examples, making use of the Python interactive console to explore the .NET framework with live objects. The expert authors provide a complete introduction for programmers to both the Python language and the power of the .NET framework. The book also shows how to extend IronPython with C#, extending C# and VB.NET applications with Python, using IronPython with .NET 3.0 and Powershell, IronPython as a Windows scripting tool, and much more. Purchase of the print book comes with an offer of a free PDF, ePub, and Kindle eBook from Manning. Also available is all code from the book.
